

Scrubbed, Gloved and Ready!

Two million American soldiers around the globe are defending the world from tyranny and terror. They are proof that freedom is not free! It has always been that way – a few fight for the rights of others and our military are real heroes. Thank you!

One million doctors in America are serving more than three-hundred-twenty million Americans with the finest health systems the world has ever had. We are the academic-medical envy of every nation. Thank you doctors, good job!

Now, in spite of our prosperity, we are being told our medical wonders are worth less each year because we, as a profession, have capitulated to third party payors who are attempting to tell us how to practice medicine. And they are doing so without even having a medical license.

Doctor, no one is going to send us a magic band-aid. So unless we fix it ourselves right now, we could easily cease to practice as we do today.

I am in the trenches every day like you and I come home tired, real tired. Yet I know if I don't fight for health care justice our health care system will cease and become inferior as in Europe and Canada. I have spoken to doctors in Europe and Canada and they are hamstrung just like we are headed if we individually fail to fight right now!

My teammates in medicine, we each are a dynamic force right now, so we must personally tell the truth to your elected politicians and your patients. If 2,000,000 soldiers can successfully defend the world, we can for sure prevail against the forces eroding the great medical services in our state and ultimately our America.

The power of over eight-hundred-thousand (800,000) doctors in America serving three-hundred-twenty million patients telling the truth will surely carry the victory if you just do your personal part.

Doctors, are we scrubbed, gloved and ready? Shall we begin right now? You will find ready listeners. Not one of our politicians wants to lose the great medical system. You have the control. They must hear it from you and what you personally want them to do. Be specific, tell everyone your solution! If not now, when? If not me, who?

Barbara A. Berry, M.D.
President
